

# Rights Future-Proofing Checklist

---

Goal: make future App Store, Play Store, and platform reviews easy to answer with records instead of memory.

## Before Publishing Any Creator Content

- Confirm the creator/rights holder has a signed authorization, accepted creator terms, or written approval on file.
- Save the evidence path in the rights register.
- Confirm the authorization covers the actual content type: audio, video, podcast, artwork, metadata, or AHOY TV scheduling.
- Confirm samples, covers, collaborators, producers, labels, publishers, artwork, stock footage, and archive footage are cleared when applicable.
- Mark content unpublished or hidden until rights are confirmed.

## Database Fields To Add Later

Add a rights table or fields so the app can prove its content state directly:

- 'rights\_status': 'pending', 'authorized', 'owned', 'licensed', 'rejected', 'expired', 'revoked'.
- 'rights\_holder\_name'.
- 'rights\_holder\_email'.
- 'rights\_agreement\_id'.
- 'rights\_evidence\_url' or internal file reference.
- 'rights\_scope': audio, video, podcast, artwork, metadata, live\_tv, promo, mobile\_app.
- 'rights\_effective\_date'.
- 'rights\_expiration\_date'.
- 'rights\_last\_reviewed\_at'.
- 'rights\_reviewed\_by'.
- 'rights\_notes'.

## App Behavior To Add Later

- Hide content from public APIs unless 'rights\_status' is 'authorized', 'owned', or 'licensed'.
- Exclude pending/expired/revoked content from '/api/music', '/api/shows', '/api/podcasts', '/api/artists', '/api/radio/manifest', and '/api/live-tv/channels'.
- Add an admin-only rights dashboard outside the consumer app.
- Add an export command that regenerates the Apple/Google rights packet from the live database.
- Add upload storage for signed agreements and release forms.

## App Review Wording

**Use this positioning consistently:**

---

Ahoy is a direct-to-artist media platform. It does not aggregate unauthorized third-party streaming services. Content is either produced by Ahoy / Little Market LLC, submitted by creators and rights holders who authorized Ahoy distribution, or otherwise licensed/cleared for app distribution.

AHOY TV is a scheduled marketing and discovery surface for Ahoy-controlled video catalog items. It is not a third-party TV, cable, IPTV, or broadcast retransmission service.

## Ongoing Review Cadence

- Review the rights register before every iOS release.
- Review the rights register before every major content import.
- Keep an annual rights audit folder by year.
- Save App Review correspondence next to the supporting rights packet.
- If a creator asks for removal, document the request and remove or hide the content before the next public content refresh.
